Manager's comment

In April the fund rose by +0,02% . Even if we increased it slightly, we maintain a rather low exposure to the equity markets (net exposure of 19%). We are focussed on maintaining a low volatility in the fund (currently around 2.5%)

The dovish messages expressed by both the FED and the ECB continue to support the equity markets despite the economic slowdown. The German 10 Years interest rate, which is the usual Safe Haven, is still in negative terms. In this context, Risk premium is not relevant anymore. One the short-term, everything could happen with Trump politics and his commercial war with china.

Our Long/Short strategies (28%), our Twin Win structured products (5,6%) allow us to perform in more difficult markets. We are ready for it.

Fund Strategy

The fund represents an alternative to bonds in a low interest rate environment. The performance objective is 2 to 4% with a volatility close to 3%.

Investment strategies put into place are tailor made and try to take advantage of market conditions that offer favourable investment opportunities, difficult to achieve in traditional asset management.

The « average » equity allocation is 20% and can fluctuate in a «normal » frame between 0% and 30%.
