Manager's comment

The fund resisted very well to the downward pressure in May, thanks to the cautious stance on the equity market (we have kept and even slightly increased the protections via short Futures) and the right selection of equity funds. The equity net exposure is currently at 44% vs 47% one month ago). Our US equity exposure is higher than in Europe as we see more potential in the US and potential headwinds in Europe (Brexit, european elections,..).

In bonds, we have decreased our exposure down to 15% (coming from 20% two months ago) as we have taken profit on short term Corporate bonds. We keep on focussing mainly on Emerging market bonds as the expected return is in line with the embedded risk.

We have kept our Gold position which is now around 7.5% of the Fund.

The cash position has been further reduced to 12% and the global USD currency exposure has been reduced from 41% to 39% along with the strengthening of the US currency.

Fund Strategy

The strategy of the fund aims at offering a superior return thanks to flexible allocation throughout all liquid asset classes and use of derivatives for hedging purpose (no leverage).

The « average » equity allocation is 50% and can fluctuate in a «normal » frame between 40% and 60% and ultimately between 20% and 80%.

As from February 2019, this strategy is realized through long only funds and ETF's, on which we apply hedging strategies via listed derivatives.
