Manager's comment

In May, the fund earned 1.6% beating our benchmark the Russell 2000 by 2.6%. This brings our return and alpha for 2023 to 0.8% and 1.0% respectively. Our volatility (25%) and beta (0.97) remain close to the corresponding values of the benchmark. Our performance can be attributed to good earnings reports with 82% of our firms beating or matching earnings forecasts. We also benefitted from the increase in the value of our semi-conductor stocks. Apparently, chip stocks had their best month in 20 years according to Dow Jones Market Data. Finally, 4 of the firms in the fund (including two banks) announced new buyback programs.

This month 70 firms announced buyback programs, including 22 regional banks who responded to the beating they received in recent months. This month we sold Audio Codes and bought Advantage Energy.

Fund strategy

The PV Buyback USA Fund is a long-only fund focused on small and mid caps listed on the US equity market. It invests in companies announcing share buyback programs to take advantage of an undervalued stock price. To identify those firms where the repurchase is most likely motivated by undervaluation, the Fund has developed a systematic approach. Fund managers are highly experienced and have a strong track record in developing and implementing this investment strategy.

Number of buyback announcements²
