Sub-Fund strategy

Global Equities RDT-DBI is a sub-fund of Eurinvest UCITS, a SICAV under Belgian law. The objective of the Global Equities RDT-DBI sub-fund is to seek the highest total return possible for its investors through equity selection and an active management of the portfolio. The sub-fund is actively managed without any link to any benchmark. The sub-fund invests in equities listed in developed markets⁽⁴⁾ only.

The sub-fund total Equity exposure is minimum 70% of NAV at all time and can also invest in Bonds. Money Market Instruments and Cash (up to 30% of NAV)

The Investment Portfolio Manager has the possibility to use financial derivatives instruments notably for hedging and return enhancement purposes.

The sub-fund meets the requirements imposed by the applicable regulations to benefit from the "Revenus Définitivement Taxés" regime (RDT-DBI) and distributes at least 90 % of the sub-fund collected revenues (after deducting expenses, commissions and charges) to shareholders annually.

RDT-DBI Regime

The RDT regime is applicable according to Art. 203, §2, al.2 CIR 92, provided and to the extent that those revenues come from dividends which themselves, meet the deduction conditions or from capital gains realized on shares that may be exempted. Thus, the RDT regime is not applicable for dividends distributed to, and capital gains realized on, the sub-fund shares, provided and to the extent that these revenues come from dividends or capital gains that do not themselves meet the qualitative conditions of RDT deduction.

This RDT exemption only applies to Belgian legal entities that invest in this fund. An individual always pays 30% withholding tax on the dividends paid out.

(2) Source data: Bloomberg. Performance are calculated on a cumulative basis for: (i) monthly period; (ii) year-to-date (period from the 1st of January of the current year till the report date); (iii) the year 2020; and on actuarial basis for periods of over one year return. The reinvestment of the gross dividends is taken into account for the calculation of the returns. Sub-fund Inception date: 29/03/2019. Figures indicated above do not include commissions possibly linked to potential entry or exit fees nor taxes.

Since Inception (annualized)

- Returns are based on historical data, which offer no guarantee of future returns.
- (3) Volatility is defined as a statistical measure of the dispersion of returns. Volatility is measured as the variance between returns from the sub-funds. Maximum drawdown is defined as the maximum observed loss from a peak to a trough of the sub-fund Net Asset Value, before a new peak is attained. Maximum drawdown is an indicator of downside risk calculated since inception. T Sharpe ratio is used to help investors understand the return of an investment compared to its risk. The ratio is calculated since inception as the annualized return per unit of annualized volatility.

The above risk level is calculated on the basis of the sub-fund's volatility over the medium term (5 years) or on a simulation if the sub-fund was created within that period. The volatility of the sub-fund may fluctuates over time, which may change its risk level.

The SRRI accounts for the market risk and risk on capital.

The sub-fund does not guarantee a protection on the capital invested by investors and therefore investors' capital fluctuates overtime.

The risk/retun profil indicated above can be essentially explained by the presence of equity in the portfolio.

For more information concerning the risks, please refer to the prospectus and KIIDs.
