

Manager's Comment

The US market rebound initiated in Mid June went out of steam in August. The S&P 500 had rallied up to 4300 points, recouping more than half (50%) its losses since the start of the year. The Index has now retreated from these levels to the 3900 mark. Such a strong upward move is indeed quite rare. As historical data show, it only took place eleven times since 1980, out of which 7 times were bear market rallies. In Europe, the move up from this year lows was dragged down by the Ukraine War, underperforming the US markets, rallying by 38% only from lows. China continues to lag close to its lows. The MSCI World Index in euros could report a decent performance of -6% thanks to USD 12% strengthening.

Despite a good second quarter earnings season, consensus earnings have finally started to fall for the rest of the year and for 2023. Indeed, with the exception of the energy sector, a fairly clear slowdown in corporate earnings growth is beginning to emerge.

The end of hopes for a Fed pivot has delivered a heavy blow to the bond markets which have been thrown into bear market territory.

The fund continues to remain defensively positioned in equity and with limited duration exposure, as we see a stagflationary environment ahead.

Beginning of August we initiated hedging positions on the Eurostoxx 50 and the S&P500 by buying Put Spreads financed by Short Calls for a notional of 7% each. In addition we closed our position in the Galloway Emerging Markets Bond fund.

Value evolution of classes R & I - Cap (€) ⁽¹⁾

Performance period ⁽²⁾	Risk metrics ⁽³⁾		R-Share	I-Share	
	R-Share	I-Share	R-Share	I-Share	
August 22	-0.2%	-0.2%	Volatility (annualized)	6.6%	6.6%
Year-to-date	-8.1%	-7.9%	Sharpe ratio	(1.07)	(1.02)
2021	8.8%	9.0%	Max. Drawdown	-18.1%	-18.1%
2020	4.1%	4.4%			
1 Year	-7.0%	-6.7%			
Since Inception (annualized)	+ 0.7%	+ 0.9%			

Sub-Fund Strategy

The strategy of the fund aims at offering a superior return thanks to flexible allocation throughout all liquid asset classes and use of derivatives for hedging purpose (no leverage).

The « average » equity allocation is 50% and between 20% and 80%.

Notes : (1) Source data: Bloomberg, Banque Degroof Petercam Luxembourg. Value evolution is based on historical data, which offer no guarantee of future returns.
 (2) Source data: Bloomberg. Performance are calculated on a cumulative basis for: (i) monthly period; (ii) year-to-date (period from the 1st of January of the current year till the report date); (iii) the year 2020; and on actuarial basis for periods of over one year return. The reinvestment of the gross dividends is taken into account for the calculation of the returns. Sub-fund Inception date: 16/10/2017. Figures indicated above do not include commissions possibly linked to potential entry or exit fees nor taxes. Returns are based on historical data, which offer no guarantee of future returns.
 (3) Volatility is defined as a statistical measure of the dispersion of returns. Volatility is measured as the variance between returns from the sub-funds. Volatility is annualized and calculated on a daily basis since inception. Maximum drawdown is defined as the maximum observed loss from a peak to a trough of the sub-fund Net Asset Value, before a new peak is attained. Maximum drawdown is an indicator of downside risk calculated since inception. The Sharpe ratio is used to help investors understand the return of an investment compared to its risk. The ratio is calculated since inception as the annualized return per unit of annualized volatility.

Risk Indicator -SRRI (Synthetic Risk and Reward Indicator)

The above risk level is calculated on the basis of the sub-fund's volatility over the medium term (5 years) or on a simulation if the sub-fund was created within that period. The volatility of the sub-fund may fluctuates over time, which may change its risk level.

The SRRI accounts for the market risk and risk on capital. The sub-fund does not guarantee a protection on the capital invested by investors and therefore investors' capital fluctuates overtime. The risk/return profil indicated above can be essentially explained by the presence of equity in the portfolio.

For more information concerning the risks, please refer to the prospectus and KIIDs.

Risks that are not necessarily included in SRRI but which may lead to NAV changes

- Liquidity risk:** Risk that positions cannot be liquidated in time at reasonable prices.
- Operational risks:** the sub-fund may lose some or all its money in case of failure in assets custody, fraud, corruption, political action or any other undesirable events.
- Management risk:** under abnormal market conditions, the usual management techniques may be ineffective or unfavourable.
- Counterparty risk:** the subfund can lose money as a result of the failure of a market player with which it does business
- Credit risk:** risk associated with bonds becoming worthless when the issuer of the bond is not able to repay its debt on maturity.
- Concentration risk:** investment policy ensures a diversification of portfolio concentration risk by limiting investment at 30% of total assets in a single sector.
- Derivatives risk:** some derivatives may increase the volatility of the subfund or expose the subfund to losses that are higher than the price of the derivatives
