

Manager's Comment

In the past two months, the fears of inflation – in spite of still very high readings on both sides of the Atlantic - have given place to worries about growth. The yield curve has therefore adjusted considerably, in particular by anticipating much less aggressive monetary policies, as data were deteriorating (like the ongoing weakness in consumer confidence) and the risk of recession growing. Ironically, this slower path to rising rates has given led to a significant rebound in risky assets (S&P +9.22%, SX5E +7.47%).

A politically weakened Biden, the return of political risk in Italy, tightening central bank policies, geopolitical risk in Taiwan, and of course the war in Ukraine continue to offer a difficult and uncertain backdrop for investors. The scope of any economic slowdown will remain a key factor for risky assets, leading potentially to recurrent bouts of volatility each time the market needs to reassess its outlook. This in turn implies that we must take measures to manage volatility and try to take advantage of it.

In July, we reduced our European equity exposure by selling the iShares MSCI Europe Quality Dividend (2%) and part the Xtrackers MSCI Europe (0.5%). In addition, we switched our exposure on the iShares MSCI World ACWI (5%) to the iShares MSCI World as we prefer to manage our Emerging Markets exposure on its own. We also reduced our materials exposure by selling part of the Xtrackers MSCI World Materials (1%). Finally, we added some duration to the portfolio by reinforcing the iShares Global Aggregate (5%) in order to reduce somewhat our positive sensitivity to a rising rate environment.

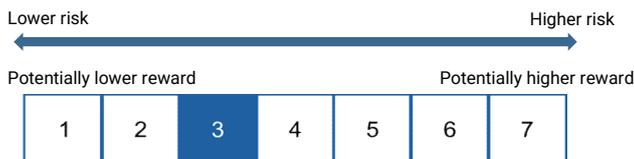

Since last month, we have considerably reduced the number of positions (from 49 to 37) and we have increased the exposure to ETF to 45%, while still keeping high conviction positions in portfolio. We intend to keep our passive exposure on par with active funds going forward, as we have a laser focus on cost, reducing the TER of our fund exposure from over 1% to 0.54%. We have 11% in cash, with some hedging strategies in place.

Sub-Fund Strategy

The strategy of the fund aims at offering a superior return thanks to flexible allocation throughout all liquid asset classes and use of derivatives for hedging purpose (no leverage).

The « average » equity allocation is 50% and between 20% and 80%.

Risk Indicator -SRRRI (Synthetic Risk and Reward Indicator)

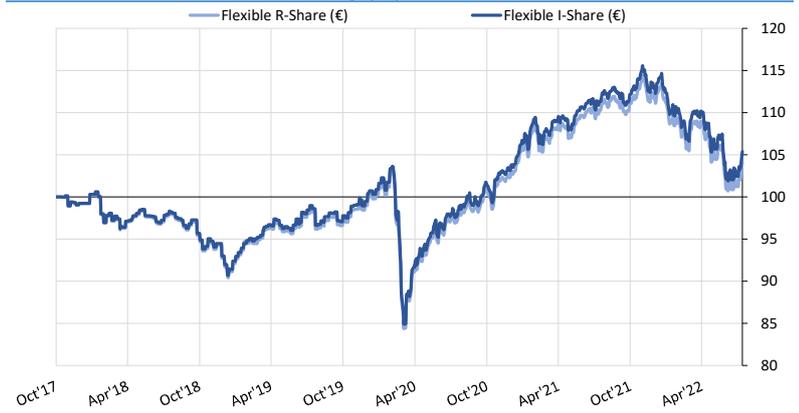

The above risk level is calculated on the basis of the sub-fund's volatility over the medium term (5 years) or on a simulation if the sub-fund was created within that period. The volatility of the sub-fund may fluctuates over time, which may change its risk level.

The SRRRI accounts for the market risk and risk on capital. The sub-fund does not guarantee a protection on the capital invested by investors and therefore investors' capital fluctuates overtime. The risk/return profile indicated above can be essentially explained by the presence of equity in the portfolio.

For more information concerning the risks, please refer to the prospectus and KIIDs.

Value evolution of classes R & I - Cap (€) ⁽¹⁾

Performance period ⁽²⁾	R-Share		I-Share		Risk metrics ⁽³⁾	
	R-Share	I-Share	R-Share	I-Share	R-Share	I-Share
July 22	3.2%	3.2%	Volatility (annualized)	6.3%	6.3%	
Year-to-date	-7.9%	-7.7%	Sharpe ratio	(0.88)	(0.84)	
2021	8.8%	9.0%	Max. Drawdown	-18.1%	-18.1%	
2020	4.1%	4.4%				
1 Year	-5.5%	-5.3%				
Since Inception (annualized)	+ 0.7%	+ 0.9%				

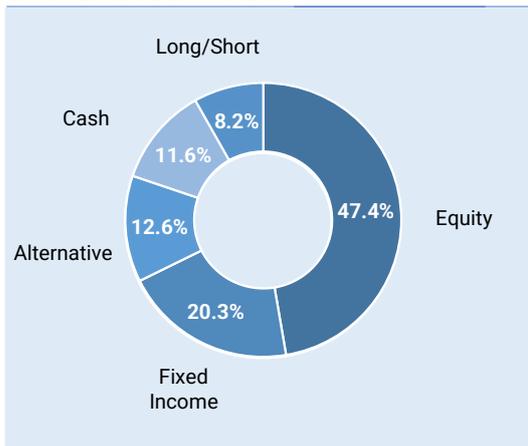

Notes : (1) Source data: Bloomberg, Banque Degroof Petercam Luxembourg. Value evolution is based on historical data, which offer no guarantee of future returns.
 (2) Source data: Bloomberg. Performance are calculated on a cumulative basis for: (i) monthly period; (ii) year-to-date (period from the 1st of January of the current year till the report date); (iii) the year 2020; and on actuarial basis for periods of over one year return. The reinvestment of the gross dividends is taken into account for the calculation of the returns. Sub-fund Inception date: 16/10/2017. Figures indicated above do not include commissions possibly linked to potential entry or exit fees nor taxes. Returns are based on historical data, which offer no guarantee of future returns.
 (3) Volatility is defined as a statistical measure of the dispersion of returns. Volatility is measured as the variance between returns from the sub-funds. Volatility is annualized and calculated on a daily basis since inception. Maximum drawdown is defined as the maximum observed loss from a peak to a trough of the sub-fund Net Asset Value, before a new peak is attained. Maximum drawdown is an indicator of downside risk calculated since inception. The Sharpe ratio is used to help investors understand the return of an investment compared to its risk. The ratio is calculated since inception as the annualized return per unit of annualized volatility.

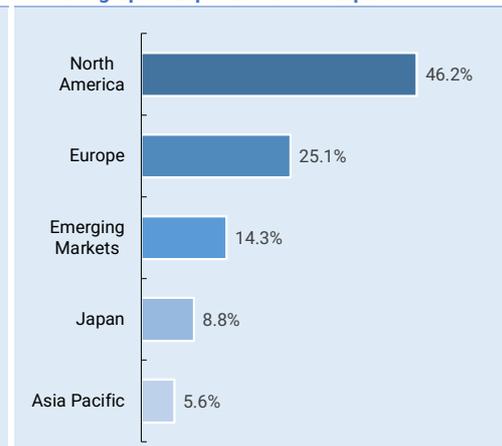

Risks that are not necessarily included in SRRRI but which may lead to NAV changes

- Liquidity risk:** Risk that positions cannot be liquidated in time at reasonable prices.
- Operational risks:** the sub-fund may lose some or all its money in case of failure in assets custody, fraud, corruption, political action or any other undesirable events.
- Management risk:** under abnormal market conditions, the usual management techniques may be ineffective or unfavourable.
- Counterparty risk:** the subfund can lose money as a result of the failure of a market player with which it does business
- Credit risk:** risk associated with bonds becoming worthless when the issuer of the bond is not able to repay its debt on maturity.
- Concentration risk:** investment policy ensures a diversification of portfolio concentration risk by limiting investment at 30% of total assets in a single sector.
- Derivatives risk:** some derivatives may increase the volatility of the subfund or expose the subfund to losses that are higher than the price of the derivatives
